

## Cloud based endpoint security management

# KDDI Cloud Inventory

**Centrally manage the growing number of devices on our Cloud!**

### - **Availability across many device technologies**

We can port this solution on to many devices such as the ubiquitous PCs, Tablet and Smartphones. Even VMware and Printers are candidates for deployment. Even ones that are access remotely. You can access device status from a single console significantly enhancing your inventory management's transparency. Remote lock and data wipes are also available on mobile devices during a remote crisis.

### - **Significant impact on workload**

Automating IT asset security management enables the IT professional to greatly reduce the tedious work of monitoring assets. Additionally, constant security risk evaluation automation eases the administrator's task of online monitoring of security breaches.

### - **Adaptability and scalability to support a broad range of organizational structures**

All Reliable and scalable internet connectivity is the only requirement to allow this service to be ported in to your organization's infrastructure regardless of size, location, and mission.

**Bypassing complex procedure and delivering result promptly!!**
